

About Campus For Future Aachen

Campus For Future Aachen is a university policy group of students at RWTH Aachen University. Our goal is to make the university more **sustainable** and thus more **fit for the future**. To this end, we would like to transform RWTH in the student parliament and, among other things, act as a mouthpiece for the many **initiatives** that are involved in the area of sustainability.

We - among others - are prospective biologists, computer scientists and environmental scientists. With great motivation and commitment, we would like to make the RWTH realize its **responsibility** as a global player and put it into practice.

In doing so, we pursue an **interdisciplinary** understanding of **sustainability**: For us, this means considering ecological, social and economic aspects together.

Sounds good? Then choose Campus For Future!

Buildings

important area of climate neutrality is the building sector. RWTH should advocate for sustainable construction and renovation of the university buildings to enable heating with exclusively renewable energies, to use the potential for solar energy and to green the facades.

Energy

Together with Students For Future, a resolution for green electricity was developed and unanimously approved in the student parliament. Since then, the university has created a concrete plan to purchase green electricity from 2023. This could finally save up to €4 million in annual environmental impact costs! We continue to advocate for real green electricity. Even though this is an effective and important step, it only concerns one third of the RWTH's CO2 emissions. That is why we also advocate a switch to eco-heating. By 2025, the university must be climate neutral!

Marc Haberland

Mobility

To ensure that you won't suffer more from your way to university by bike than from HöMa, we advocate for safe bike lanes in Aachen. And when it rains, we should be able to rely on dependable and free public transport.

Greening

A green campus looks beautiful and also promotes Aachen's biodiversity. After all, it is not only students who meet on green spaces, but also insects. In concrete terms, this means a systematic program for green roofs and unsealing of RWTH areas. Where unsealing is not possible, raised beds bring a touch of nature to the campus.

Transparency in third-party funding

How independent are our research and teaching actually? RWTH is the university with the most third-party funding in Germany. Where does this funding come from? Let's finally create transparency and see who pays for our studies!

Drinking water access on campus

To save both costs and plastic, we advocate for drinking water facilities on university campuses.

Social and Teaching

Noëmi Preisler

Places for encounters

In order to promote togetherness between students, we would like to create new **places for encounters** as well as maintain and expand those that already exist. That's why, among other things, we are committed to ensuring that **Templergraben remains car-free**.

Anti-bias and psychological support

In terms of social sustainability, we are organizing so-called anti-bias trainings, which serve to reduce prejudice and will be open to all students.

This goes hand in hand with the fact that we want to promote anti-discrimination work at the university and offer safe spaces to marginalized groups. Following on from this, psychosocial support at RWTH should also be expanded.

Modules

Want to box? Neither do we. Unfortunately, you have to fight to get credit for the Leonardo project in almost all degree programs. We are committed to expanding the Leonardo project (and not at the expense of volunteers) while making it easily creditable in more degree programs. In the future, we want ecological, social and economic sustainability to be a mandatory part of all courses of study!

Credits for initiatives

So that you no longer have to choose between focusing on your studies or **getting involved in an initiative**, we want to ensure that this very involvement is simplified and promoted through creditability in your studies. So that you no longer have to choose between focusing on your studies or getting involved in an initiative, we want to ensure that this very involvement is simplified and promoted through creditability in your studies.

Mensa

Nothing but salad and fries? We call for an expansion of meat-free dishes. This will make dining halls and cafeterias more attractive to vegetarian and vegan students. In addition, our food should reach us through ecological and social supply chains. Less packaging and avoiding disposable products further reduce the carbon footprint of meals. And to avoid trash as well as food waste, we call for a concept that more accurately plans the quantities needed in dining halls.

Sustainable investment

While the university is slowly reducing its emissions, banks continue to finance oil and gas projects worldwide with RWTH money. Therefore, we call for RWTH accounts to be switched to an ethical bank that invests sustainably.

Alexander Duval

Structures

Who does what? For a transformation of the university towards more sustainability, it is essential to anchor this process in the university structures and to provide the necessary people power for it. A key problem is the lack of capacity that impedes sustainability processes. That is why we are calling for more positions in the sustainability staff unit and in other university bodies. Because according to current trends, in four years our CO2 budget will be depleted. So let's start now! Another important structure for sustainable transformation is an official certification of the university to let external parties observe the ongoing change.

Our candidates

1. Theresa Janning
2. Johannes Parschau
3. Marc Haberland
4. Lea Szukalla
5. Antonia Leue
6. Noëmi Preisler
7. Annette Adams
8. Silas Danz
9. Marie Mehlfeldt
10. Florian Winkler
11. Lina Lettau
12. Alexander Duval
13. Noah Rensmann
14. Therese Liegmann
15. Maximilian Nitzinger
16. Charlotte Hinz
17. Markus Strauch
18. Stefania Symeonidou
19. Grigory Vartanyan
20. Korbinian Mehlstäubl
